Summary

Senior Backend Engineer with 6 years of experience working on large-scale web applications for huge companies such as Globo.com, 3M, and Walmart.

Passionate about clean code, quality, team-building, product developer and interviewing process.

Currently, looking for a **challenging leadership position** with promising future.

Education

Electrical Engineering, University of the Sinos Valley
São Leopoldo, Brazil — 2012-2016**

Latest Experiences

Senior Software Engineer, Movinga GmbH
Berlin, Germany — 2016-Currently

Movinga is Europe's leading online moving service. Our mission is simple: to provide the best end-to-end moving experience.

Movinga acts as a middleman between the customer and truck drivers, providing the platform for booking movings. Intended to bring the moving industry into the Internet age with an easy and efficient web and mobile application as well as custom contact during the moving process.

Currently, I am taking the lead on organizing the refactoring and scaling of the Pricing API along with our price experts and a great tech team. We have to create abstractions for a convoluted pricing model, since it has to cover a huge amount of factors, including regionality, seasonality, capacity, urgency and so on.

Software Engineer, Globo.com
Porto Alegre, Brazil — 2015-2016

Globo is South America's biggest broadcast network and the second-largest commercial TV network in annual revenue worldwide, just behind the American ABC.

As a backend engineer in the videos team, I handled modeling, background processing, microservices, scalability and availability issues on daily basis. Building a trustable and scalable publishing platform for videos. I was one of the first hires for a new branch. I have participated on the definition of the interviewing process, hiring of new developers, team-building and cultural related activities.

Software Developer, PrimeSystems
Porto Alegre, Brazil — 2014-2015

I have worked as a full-stack developer, handling since backend problems up to front-end and also deploy/server issues. With a great team support, I could work on development and maintenance of five very active web applications, with mobile API support and a huge amount of active users. The platform provided mobile infrastructure for more than 50 thousand active users, our clients were for huge companies, such as Walmart and Samsung.

Technical Writer / Teacher, iMasters
São Paulo, Brazil — 2012-2015

I have worked as a technical writer and teacher for iMasters. I have created content for several programming topics, mostly basic concepts. It was an independent part-time job, working on text and video tutorials for software development tools and frameworks such as Javascript, jQuery, Node, Ruby on Rails, and git. I was able to deeply study frameworks and tools, learn more about its power and get constantly in touch with young and creative developers.

Lead Developer, Nucleo Sistemas
Caxias do Sul, Brazil — 2012-2013

I have led a web development team on the migration of an old desktop ERP into a modern cloud based SaaS application. Created at the time with PHP, OOP, MVC, Zend Framework, Node JS (for real-time modules), and Java (As a back-office migration resource for legacy clients). It was incredible to have to opportunity to work close to the business and clients as well as to improve the internal development process for the company.

Junior Developer, Nucleo Sistemas
Caxias do Sul, Brazil — 2011-2012

I have worked with Delphi, in a system designed to help maintenance operators on programming firmwares for electrical bus systems. It was a great opportunity to learn more about electronics, low level development and also a lot about deployment, releasing and other processes of software development.
